Contents

1	Requirments	3
2	Installation	5

AceTool is a command line interface (cli) for AceProject. This tool helps you with all common tasks you can do on the aceproject website but faster in the terminal. This documentation will show you how to use it.

CHAPTER 1

Requirments

- You need an account on AceProject.com
- php \geq 5.6
- composer

CHAPTER 2

Installation

- clone the project somewhere on your computer.
- Install all dependencies by executing `composer install` in the project directory.
- Test it by executing `php ace.php`. It should show you all available commands.

(more documentation will follow)
